

MVQUICK Live battery hot swapping made easy!

Made in Europe

Hot Swap batteries without switching off the camera

UPS with 21Wh reserve for your camera

Main features:

- Sandwiched interface between camera and battery.
- Automatic detection of battery removal, without power interruption to the camera
- Battery hot-swapping without the need of powering down the camera
- Can provide an extra 21Wh as a UPS system in case the main battery empties prematurely
- High-load cell technology permits discharging of up to 10A when used as a stand alone power source
- Automatically recovers a part of the energy spent during the hot swap period upon reinstatement of a fresh battery
- If used as UPS device, it can be charged normally on standard V-lock chargers
